Calculator for Farm — install on iPhone

A step-by-step guide for your Mac and Xcode. It takes about 20 minutes the first time.

What you need

- A Mac with **Xcode** (free from the Mac App Store).
- Your **Apple ID**.
- Your iPhone and its **cable**.
- The file **ios-calculator-for-farm.zip**. Double-click it to unzip. Inside: **ContentView.swift** (app code), the **web** folder (the calculator) and **AppIcon-1024.png** (black plus icon).

Part 1 — Get ready (once)

1. Install **Xcode** from the Mac App Store and open it.
2. Go to **Xcode** → **Settings** → **Accounts**, click **+**, choose **Apple ID** and sign in.

Part 2 — Create the project

3. **File** → **New** → **Project** → **iOS** → **App** → **Next.**
4. Product Name: **CalculatorForFarm** · Team: **your Apple account** · Interface: **SwiftUI** · Language: **Swift**. Click **Next**, choose a place to save, click **Create**.

Part 3 — Add the files

5. In the left sidebar click **ContentView.swift**. Delete everything in it and paste in the contents of the **ContentView.swift** from the zip.
6. Drag the **web** folder into the left sidebar. Tick **Copy items if needed** and your app target, then **Finish**.
7. Click **Assets** → **AppIcon** and drag **AppIcon-1024.png** into the empty icon box.
8. Click the blue project icon at the top of the sidebar → **General** → set **Display Name** to **Calculator for Farm**.

Part 4 — Put it on your iPhone

9. Connect the iPhone with the cable and tap **Trust** on the phone.
10. On the iPhone: **Settings** → **Privacy & Security** → **Developer Mode** → **On**. The phone restarts.
11. In Xcode, choose your iPhone at the top of the window, then press the **Play** button (the triangle at the top left).
12. First time only, on the iPhone: **Settings** → **General** → **VPN & Device Management** → tap your Apple ID → **Trust**.
13. Open **Calculator for Farm** from the home screen. It works offline and saves your numbers on the phone.

Free Apple ID or paid account?

Free Apple ID	The app stops opening after **7 days**. Connect the phone and press **Play** in Xcode again. Your saved numbers stay.
Paid developer account (US$99 / year)	The app lasts **1 year**, and you can share it with other iPhones through **TestFlight**. The App Store itself may reject a simple app like this, so TestFlight is the safer way to share.

If something goes wrong

- **“Signing requires a development team”** — click the blue project icon → **Signing & Capabilities** → choose your Apple ID under **Team**.
- **“Untrusted Developer”** on the iPhone — do Part 4, step 12.
- **“Developer Mode disabled”** — do Part 4, step 10, then press **Play** again.
- **The app opens but is blank** — the web folder wasn't added. Drag it in again and make sure your app target is ticked.
- **“Bundle identifier is not available”** — in Signing & Capabilities, change it to something unique, for example com.yourname.calculatorforfarm.

Updating the app later

When you get a new version, replace the files inside the **web** folder in Xcode with the new ones and press **Play** again. Your saved numbers stay on the phone.

No Mac to hand? The free alternative is a home-screen app: upload the calculator-for-farm folder to app.netlify.com/drop, open the link in Safari on the iPhone, then Share → Add to Home Screen.
